Our Core Beliefs.

Things we maintain in work

We know that no matter how skilled we are, if we are not maintaining a certain standard while doing projects, customers will not be happy and in turn, there will be no business to run for us. That truth requires us to believe and practice certain values.

Honesty that you can trust

We do not have any secret agenda to just make a sale to our clients. We focus on being transparent about how we can help a particular business and deliver value.

Integrity that never fails you

Promise is a very sensitive trait in doing good business. We try to keep our promises and create goodwill from our clients.

Growth that brings you success

We value growth. If our client's grow, we grow. The way we see this, It is a partnership for a profitable future.

Our Services

Apparel

Publishing

Healthcare

Advertising

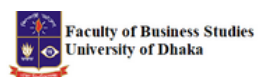

Retail

Ecommerce

Travel

Real Estate

Our Clients

The Process

We proudly call ourselves a project management company. We know firsthand that not following a well established process that delivers expected outcome is just a recipe for disaster. Time and time again this has been proved. People, process, technology - we stitch them all together to bring out wonderful results.

Following a Well Defined Process Helps. How?

Firstly, it sets the expectations right for both parties.

Secondly, management in organizations needs results, they don't want the hassle of talking back and forth. Setting a clear picture keeps their worries at bay.

That is why we are always obsessed with well defined roadmap, strategy, process. Without this we believe we are blind and if our clients needs help, we set the people and the expectations right.

Steps We Follow.

1

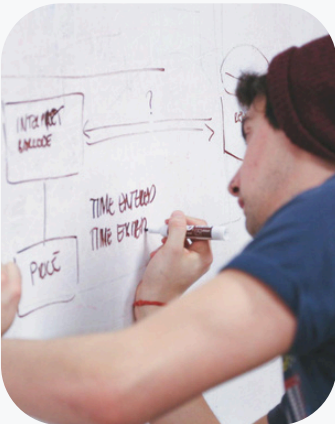

Need Assessment

This stage is the most crucial of all. We sit with our clients no matter how small or large the problem is, we ask questions, document and communicate our findings with clients in order to get the 360 degree view of the said problem.

2

Process Mapping

We use various kinds of tools and techniques to visualize and simplify the process that needs to be implemented. Many times we find that there is no defined process but after the need assessment is completed and communicated to the stakeholders, a defined process starts to show up.

Steps We Follow.

3

Implementation

With the process map, we then move onto the development and implementation of the system. We use agile methods of fast change and continuous communication with the stakeholders so that they never feel left out.

4

Training & Delivery

Moving people from an older implementation habit to a newer system is never an easy task, but we steer through this with accuracy. Doing multiple training sessions, keeping track of the usage and helping onsite if needed is what makes sure the hard work is marked as a successful delivery.

SERVICES

IT Team Support

Own Your Team with Business Advantage

With this service we deliver companies an availability advantage by giving them a skilled development team which they can call their own. They can turn on or shut down the service whenever they want, we don't complain. Need more people? done. Need deadlines to be met? done as well. No more sloppy freelancers, own your team with us.

Ideal For

IT Company Leaders

Many IT companies face a problem of whether to expand their team or not. Since the inflow of projects is not always steady, the decision of expanding the team sometimes can get risky. We offer an on-demand team support by eliminating this risk. Whenever not needed, our client can just shut off the team.

Startup Founders

Developing an MVP and putting it in front of potential investors is the most crucial task for any startup. But funding limitation and a lack of skilled team in the market gets in the way. Our team support can really help those founders while tackling both of these challenges.

Future Entrepreneurs

If you're an aspiring entrepreneur with a strong network for IT projects but no team to execute them, and no plans to start a company yet—we've got your back. With us, you get a reliable, dedicated team you can call your own, backed by a real company, not risky freelancers.

What You Get

Dedicated Development Team

We Provide businesses with a full development team, including developers, testers, and project managers, fully dedicated to their project but managed and supported by Webbly's systems and processes.

On-Demand Developer Support

Flexible access to developers with specific skill sets (e.g., front-end, back-end, mobile) as and when needed, perfect for addressing short-term or seasonal manpower gaps.

Project-Based Development Support

Full-cycle project support for specific software or web development projects, where Webbly's team steps in from the initial development phase to deployment, operating as an external team under the client's direction.

IT Support and Maintenance Services

Ongoing support for existing IT infrastructure, including troubleshooting, updates, and system optimization, acting as an off-site IT team to resolve issues and ensure continuity.

MVP Development and Prototyping

Building Minimum Viable Products (MVPs) quickly and efficiently for startup founders to test product ideas, gain user feedback, and attract investors without the costs of a permanent team.

Custom API Development and Integration

Development and integration of custom APIs to facilitate smooth communication between different software systems, enabling seamless data exchange and system functionality.

SERVICES

Business Web Foundation

Stay Online for Business Success

Companies who are aware of the reality that bulk of their customers are online these days, can not afford to stay anymore in printed brochures and flyers. For them, we act as a one stop service center who will do everything to keep their business in the web.

Ideal For

E-Commerce Owners

E-commerce companies often suffers from operational bottlenecks and low online traffic even though their online setup seems to be perfect. Since high frequency sale is number one priority for them, a faulty online setup can drive the profit margin down to zero. We can help with the online and IT setup that just works.

Business Owners

Corporate reputation in front of stakeholders is a matter of prestige for decent sized companies. Sorting out what to show in front of the stakeholders and how to show requires a lot of time. Creating this overall online presence is a matter of craft and we are good at it. We encourage the leaders to show their true worth online, we can help.

What You Get

> Custom Website Design and Development

Tailored website solutions built from scratch to meet specific client needs and branding.

> E-commerce Development

Creation of online stores with secure payment integrations, product management, and a smooth customer experience.

> Content Management System (CMS) Development

Development of websites using CMS platforms like WordPress, Joomla, or custom-built CMS solutions, allowing clients to manage content easily.

> Web Application Development

Building web-based applications for specialized functionalities, such as customer portals, booking systems, and more.

> UI/UX Design

User interface and experience design services focused on creating visually appealing and user-friendly websites.

> Landing Page Development

Design and development of focused landing pages optimized for conversions, such as sales or lead generation campaigns.

SERVICES

Business Automation

For Efficiency & Profitability

Ideal For

CEO'S & Managing Directors

CEOs and Managing Directors are constantly balancing strategic growth with operational efficiency. Business automation services can transform this dynamic by simplifying workflows, reducing manual errors, and enabling better decision-making through real-time data insights.

By automating repetitive workflows in the organization, leaders can reclaim valuable time to focus on achieving long-term goals. We think automation isn't just a convenience, it's a strategic advantage that ensures a business stays agile and ahead of the curve.

What You Get

Workflow Automation Software

Custom solutions that automate repetitive tasks and streamline workflows, such as document processing, approval workflows, and notifications.

Customer Relationship Management (CRM) Systems

Development of CRM systems tailored to manage customer data, sales processes, and customer interactions efficiently.

Enterprise Resource Planning (ERP) Solutions

Comprehensive software solutions for managing key business functions, including inventory, accounting, HR, and supply chain in a unified system.

Inventory and Supply Chain Management Solution

Software to manage inventory levels, track shipments, and optimize supply chain processes.

Human Resource Management Systems (HRMS)

Tools for managing HR functions, such as payroll, attendance, recruitment, performance reviews, and employee records.

Finance and Accounting Systems

Development of financial automation tools for invoicing, expense tracking, budgeting, and reporting.

What You Get

Project Management Tools

Custom project management software to assist in task assignment, timeline tracking, resource management, and project reporting.

Sales and Marketing Automation Tools

Solutions to automate lead generation, follow-ups, email marketing, and sales funnel tracking for streamlined customer acquisition.

Document Management Systems

Systems to store, manage, and track electronic documents, making document sharing and retrieval more efficient.

Point of Sale (POS) Systems

Software solutions to manage sales, inventory, and customer data for retail businesses.

Data Analytics and Reporting Tools

Development of custom dashboards and analytics tools to provide insights into business performance, sales trends, and operational efficiency.

Customer Support Automation

Solutions like chatbots, ticketing systems, and automated response tools to improve customer support and reduce response time.

What You Get

Task and Time Tracking Software

Custom project management software to assist in task assignment, timeline tracking, resource management, and project reporting.

Compliance and Risk Management Solution

Software that helps businesses comply with industry regulations, manage risks, and ensure operational integrity.

Vendor and Procurement Management Systems

Software for managing vendor relationships, purchase orders, and procurement workflows to streamline sourcing and vendor interactions.

Custom APIs for Automation

Development of APIs to connect different systems, enabling seamless data exchange and process automation between platforms.

Custom GPT Creation

Using OpenAI's advanced language model technology, we create custom GPT solutions tailored to fit your business needs. These AI-powered models can support various functions, from customer engagement to internal knowledge management, all customized with your brand's data, tone, and requirements. By building AI solutions that understand the specific context of your business, Custom GPT Creation allows for smoother, more efficient interactions and automates tasks that usually require significant manual effort.
